Overview Prompts

300 prompts · 10 countries · 2 VLM judges × 3 presentation orders

Audit overview

Each prompt has 3–4 candidate images; utility is the mean human alignment rating (0–1). Judges pick one image per presentation order.

Qwen regret 0.160 vs. 0.199 for a random pick	Gain over random +0.039 95% CI +0.016 to +0.062	Below-mean picks 36.3% vs. 43.1% for a random pick	Qwen picks in slot A 48.8% vs. 27.8% if slot-blind	Unanimity gate keeps 40.3% 121 of 300 kept gain +0.141	Cross-model gate keeps 19.7% 59 of 300 kept gain −0.060
--	---	---	---	---	--

Judges favour early slots

Share of valid picks by presentation slot. Dashes mark the rate expected from a slot-blind judge.

Slot shown to the judge. Qwen: 900 valid calls, $\chi^2(3) = 219.2$; Smol: 886 valid calls, $\chi^2(3) = 521.5$.

What agreement gates keep, and what they throw away

Qwen's original-order pick, scored as gain over random, on the prompts each gate keeps and on those it rejects. Bars show 95% intervals.

GATE	KEPT PROMPTS	REJECTED PROMPTS	KEPT REGRET
No gate Qwen's original-order pick	+0.039 n = 300	none rejected	0.160
Unanimity Same Qwen pick in all three orders	+0.141 n = 121	−0.030 n = 179	0.074
Cross-model Qwen and Smol picks match	−0.060 n = 59	+0.064 n = 241	0.249

A useful gate should keep prompts where the judge does better than on the prompts it rejects. Unanimity does (+0.141 vs. −0.030); cross-model agreement does the reverse (−0.060 vs. +0.064).

Regret by country

Mean regret (best utility – chosen utility) on each country's 30 prompts, original order. Lower is better.

Gain over random, by policy

Mean utility gain on the prompts each policy answers; right-hand column is the share answered.

Chilean family lunch, children eagerly finishing homemade pastel de choco

The same candidates in three presentation orders

Outlines only for the selected judge's pick in the original gate. The second column shows the human-best pick. The third column shows the pick in the presentation order.

Human ratings

Means over 1000 ratings, 0–1. Alignment is the utility (higher is better); disapproval and missing elements are lower is better.

GENERATOR	ALIGNMENT	STEREOTYPE	MISSING EXPL.	MISSING IMPL.
SD-3.5-Large	0.80	0.80	1.00	0.80
Flux-1-Dev	0.80	0.80	1.00	0.80
Qwen-Image	0.83	0.80	0.93	0.80

Selection metrics, original order

A variation pick would score 0.445 on average (regret 0.555); the best image scores 0.833.

Pick	QWEN	SMOL
SD-3.5-Large (slot A)	0.833	0.333
Flux-1-Dev (slot B)	0.833	0.333
Qwen-Image (slot C)	0.833	0.333

Picks by order

Order	Slot 1	Slot 2	Slot 3
Qwen	A: SD-3.5-Large	A: Flux-1-Dev	A: Qwen-Image
Smol	B: Flux-1-Dev	B: Qwen-Image	A: Qwen-Image

Unanimity gate

Keeps Qwen's pick only if it is the same in all three orders. Qwen's picks by order: SD-3.5, Flux, Qwen-Image.

Cross-model gate

Keeps the pick only if Qwen and Smol agree in the original order. Qwen's picks by order: SD-3.5-Large, Smol chose Flux-1-Dev.

Rejects

Keeps the pick only if it is the same in all three orders. Qwen's picks by order: SD-3.5-Large, Smol chose Flux-1-Dev.
