

Audit overview

Each prompt has 3–4 candidate images; utility is the mean human alignment rating (0–1). Judges pick one image per presentation order.

Qwen regret 0.160 vs. 0.199 for a random pick	Gain over random +0.039 95% CI +0.016 to +0.062	Below-mean picks 36.3% vs. 43.1% for a random pick	Qwen picks in slot A 48.8% vs. 27.8% if slot-blind	Unanimity gate keeps 40.3% 121 of 300 kept gain +0.141	Cross-model gate keeps 19.7% 59 of 300 kept gain -0.060
--	---	---	---	---	--

Judges favour early slots

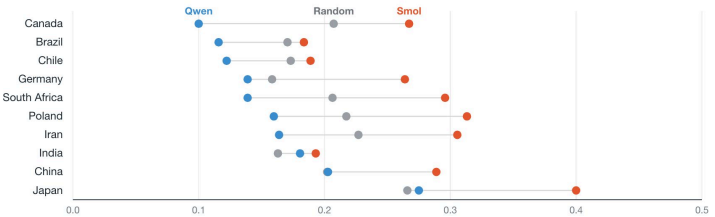

Share of valid picks by presentation slot. Dashes mark the rate expected from a slot-blind judge.

Slot shown to the judge. Qwen: 900 valid calls, $\chi^2(3) = 219.2$; Smol: 886 valid calls, $\chi^2(3) = 521.5$.

Regret by country

Mean regret (best utility – chosen utility) on each country's 30 prompts, original order. Lower is better.

What gates gates keep, and what they throw away

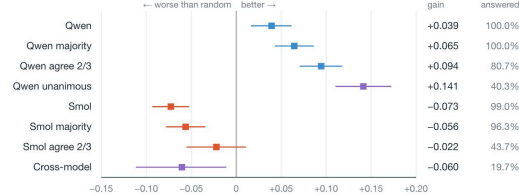

Qwen's original-order pick, scored as gain over random, on the prompts each gate keeps and on those it rejects. Bars show 95% intervals.

GATE	KEPT PROMPTS	REJECTED PROMPTS	KEPT REGRET
No gate Qwen's original-order pick	+0.039 n = 300	none rejected	0.160
Unanimity Same Qwen pick in all three orders	+0.141 n = 121	-0.030 n = 179	0.074
Cross-model Qwen and Smol picks match	-0.060 n = 59	+0.064 n = 241	0.249

A useful gate should keep prompts where the judge does better than on the prompts it rejects. Unanimity does (+0.141 vs. -0.030); cross-model agreement does the reverse (-0.060 vs. +0.064).

Gain over random, by policy

Mean utility gain on the prompts each policy answers; right-hand column is the share answered.
